DATE: July 6, 2017

CONSTRUCTION ALERT

CONCERNING IMMINENT CONSTRUCTION ACTIVITY

35kV Ductbank Project Update

ITEMS OF INTEREST: There will be construction activity at night in Jefferson Park Avenue starting on July 10, 2017. The work will take place from 7pm to 5am. The work will be complete in mid-Aug. 2017.

Faulconer Construction will be installing an electrical ductbank in the center lane of JPA near Cabell Hall. Steel plates will cover the excavation from 5am to 7pm and the center lane will remain in use during the day. Faulconer will work in 100’ sections of the road and will move east towards Monroe Lane over the next several weeks.

BACKGROUND: The 35kV Ductbank Project will install 2.75 miles of 35 kV electrical ductbank to provide a dedicated underground power feed to the University of Virginia. The new ductbank will connect the existing Sherwood, Alderman, and Cavalier substations through a combination of two, four, and six way underground ductbanks consisting of 8” PVC conduits encased in concrete. Large concrete electrical vaults will be installed at approximately 500 foot intervals along the ductbank, the largest vaults measure 9’x9’x17’ outside dimensions. The installation of the ductbank requires road closures in several areas.
