Poe and Patterson Alley Addastone Installation

Background:

Several years ago, The University installed a product called “Addastone” on the majority of Poe Alley as part of a landscape improvement project. The product is made up of small gravel that is glued down to the existing asphalt base of the alley and courtyard. The result is a surface appearance that is appropriate for the historic setting of the Academical Village and more aesthetically pleasing than standard asphalt. This project will complete the installation of Addastone on the western end of Poe Alley and the entirety of Patterson Alley.

Construction Impacts:

The project will require the closure of Poe and Patterson Alleys from May 23rd – June 1st. The procedure will first clean the alleys and then apply a primer coat that needs to cure for 24 hours. Then the Addastone product is applied over the course of several days and must be allowed to cure for 24 hours before the alleys can be reopened. The product and procedure are highly weather dependent.

Due to the limited size of scope in Poe Alley, our target date for completion is May 26th. Depending on weather, this date may need to be extended. An update will be sent to permit holders on Friday, May 25th.

The construction will be executed by UVA’s in-house Project Services Department and Faulconer Construction.

Schedule:

Typical workday hours are Monday – Friday, 7:00am – 5:00pm. The overall schedule and daily time parameters are subject to change due to weather impacts.

Supporting Information:

Please see the diagram on the subsequent page to better understand the site logistics.
