CONSTRUCTION PROJECT ALERT

Memorial Gymnasium Masonry Survey

Project Background: UVA has hired McMullan Associates to perform a Condition Survey of the masonry structure at Memorial Gymnasium. This project will take place in two phases.

- The first phase will survey the sidewalk on the west side of the building, part of which is supported by a concrete retaining wall and concrete support posts. These features are showing signs of deterioration and therefore need to be surveyed and inspected. Along with this sidewalk survey, the original concrete steps leading to the west building entrances will be inspected and surveyed as well. **This west sidewalk exterior survey will take place tomorrow, April 30, from 9:00am – 6:00pm.**
- The second phase will survey several of the building features that are also showing signs of deterioration. Specifically, the large concrete arched windows, upper entablature, engaged columns, and belt course. These building elements will be surveyed on a near-future date (TBD in conjunction with the building users), which will require a lift situate on the east side of the building. In advance of these inspections, UVA masons will perform several probes at various locations. This activity will be coordinated in advance with the building occupants.

Imminent Construction Activity: Phase 1: West Sidewalk survey

- Schedule: 04/30/2019 – 9:00am – 6:00pm
- Work performed by McMullan Associates and ECS Testing
- Scope: Engineers will be inspecting the concrete conditions on the underside of the stairs, and on the retaining wall and support posts of the sidewalk. **The sidewalk will remain OPEN throughout the day.** There will be several core-samples taken from the concrete structures, which will result in the sound of drilling into concrete, but should not result in the reverberating noise of a hammer drill. Building occupants should expect minor noise, and that the engineers will be visible form the basement weight room windows.
- **No Parking impacts to the alley on the west side of the building.**
- Please see diagram below for further details.
