CONSTRUCTION ALERT
Randall Hall Climate Improvement Project

ITEMS OF INTEREST:
- On **Wednesday, March 6th and Thursday, March 7th**, UVA Facilities Management Carpenters will be loading 2x4s and plywood into the attic of Randall Hall by using an articulating forklift. The load-in will utilize and attic window for access.
- The sidewalks around Randall, Varsity, Cobb and Robertson Halls will be temporarily closed as the materials are transported to the laydown area.
- The west entrance to Randall Hall will be closed during the work activity. It will be available for emergency egress.
- This material delivery is scheduled to occur during Spring Break in order to minimize disruption to pedestrians in the area and the occupants of Randall Hall.

BACKGROUND:
- Randall Hall was built in 1900 as a dormitory. This project will improve the climate conditions in Randall Hall by replacing all of the fan coil units and providing branch lines from a fresh air system into each room in the building. One half of the attic does not have a floor and this material will be used to create a safe floor for construction and future maintenance access.

ISSUED BY:
- James Zehner, Senior Historic Preservation Project Manager
  - UVA Capital Construction & Renovations Department
