

UNIVERSITY OF VIRGINIA FACILITIES MANAGEMENT

REPORT ON THE CONDITION

OF

UNIVERSITY FACILITIES

For the Fiscal Year Ending June 30, 2013

2011-2012 Facilities Condition Report

Facilities Inventory.....	2
Condition of Agency 207 E&G Facilities.....	4
Resources for Maintenance and Repair of Agency 207 E&G Facilities.....	6

Appendices

- A.....Facilities with Agency 207 Educational and General (E&G) Data**
- B.....Facilities with Agency 207 Auxiliary Data**
- C.....Facilities with Agency 209 Data**
- D..... Agency 246 University of Virginia’s College at Wise Data**

FACILITIES INVENTORY

The University of Virginia (UVA) facilities portfolio includes 561 buildings and corresponding infrastructure, encompassing sixteen million gross square feet of building space, with a conservatively estimated replacement value of 4.3 billion dollars. The facilities portfolio constitutes a significant portion of the total assets held by the University. This report offers a maintenance condition synopsis for these assets and a discussion of the on-going reinvestment needed to assure their continued usefulness.

For administrative and budget purposes, the University's main grounds in Charlottesville consist of Agency 207 and Agency 209. Agency 207 is subdivided into two operational categories: Educational and General (E&G) and Auxiliary. The following items should be considered when discussing these categories:

1. Agency 207 E&G refers to the academic division of the University supported by general funds allocated by the Commonwealth. This includes the Medical School, Nursing School, and Health Science Center Library.
2. Agency 207 Auxiliary spaces belong to organizations that are self-supporting such as the Housing and Athletic departments. These organizations receive no general fund support.
3. Agency 209 is the patient care portion of the University's Health Systems division.

The UVA Facilities Management (FM) staff prepares this report on an annual basis. The FM staff has direct access to the inspection and cost data for Agency 207 E&G facilities. Facilities data for Agency 207 Auxiliary and Agency 209 has been provided by their respective administrators. The facilities data for Agency 246, the University of Virginia's College at Wise, is not included in the body of this report; however, the data is provided by the college's administration and can be found in Appendix D.

Table 1 below shows the number of buildings, gross square feet and replacement value of the buildings and infrastructure maintained by Agency 207 and Agency 209.

Table 1- Inventory

Category	Number of Buildings*	Gross Square Feet**	Replacement Value***
Agency 207 E&G	319	7,306,217	\$2,496,984,242
Agency 207 Auxiliary	211	6,021,121	\$1,047,683,102
Agency 209	31	3,342,000	\$781,774,126
Total	561	16,681,043	\$4,326,441,470

* Some buildings consist of more than one agency. For the purposes of this report, each building is counted once and each building is assigned to the category that has the majority of space in that building.

** Calculated based on the percentage of financial responsibility and space allocated to each category in each building.

*** Calculated as the total value of each building (or infrastructure component) multiplied by the percent financial responsibilities and space allocated to each category.

Replacement Value

The term “replacement value” has a long and varied history of use in the type of analysis contained in this report. A logical assumption is that replacement value means the total cost to replace a building if it has to be completely rebuilt. However, for this report, when *replacement value* is used, it refers to *the value of those building’s components that an organization is obligated to maintain*. It may be clearer to think of this as the asset’s total maintenance value. For newly constructed and renovated facilities, replacement value refers to a portion of the total amount that would be needed to actually build or replace the facility, specifically the construction cost. Replacement value does not include additional costs for line items such as architectural fees, project management fees, and furnishings; nor does it include the cost of adapting a building to changing occupant needs, building codes, or fire and life safety requirements.

Infrastructure

Facilities Management maintains many assets that are not buildings, such as sidewalks, roads, curbs, steam tunnels, sewer and water lines, buried electrical lines, and light poles. In fact, the infrastructure assets account for \$752,665,799 of the total replacement value shown in Table 1.

During the past two fiscal years, efforts were made to better assess and document the infrastructure. This provided a preliminary assessment of actual maintenance needs on a system by system basis found throughout the infrastructure as well as a more accurate total replacement value. Geographic Information Systems (GIS) was used to measure the length and size of steam tunnels, sidewalks, roads, electrical and steam utilities, storm and sanitary piping, and domestic water lines. Current construction and material costs were then used to determine a value. Deficiencies were reviewed by researching the Energy and Utilities Master Plan report completed in Jan. 2006, detailed interviews with Energy and Utilities staff and supervisors, and visual inspections where OSHA regulations allowed. Current construction and material costs were used to determine the cost of these deficiencies. An updated Energy and Utilities Master Plan will be completed by next fiscal year. The information from this assessment will be used to validate and improve the accuracy of the Infrastructure values.

Age

Generally speaking, as the age of a building or infrastructure component increases, so does the maintenance demand. Although some components of a building can last for many decades, such as the foundation, framing, and exterior walls; the average life span of most electrical, mechanical, and roofing systems is between twenty-five and thirty-five years.

Of the 319 buildings assigned to Agency 207 E&G, 227 (72%) are more than 30 years old. For Agency 207 E&G facilities, the average age is 71.6 years, the median age is 61 years, and the weighted age is 51 years, where weighted age assigns more weight to larger facilities.

CONDITION OF AGENCY 207 E&G FACILITIES

Maintenance Backlog

Facilities Management gathers information about the maintenance needs of the Agency 207 E&G buildings by performing facility condition assessments. The goal is to inspect E&G buildings once every four years. The assessments result in a number of immediate repairs. They also document repairs that are needed at the time of the inspection but cannot be undertaken at that time due to funding or other constraints. These deferred maintenance items become the maintenance backlog for that building. It is important to distinguish between what a facility may need in terms of maintenance, and what it may need in terms of adaptation or modernization. The maintenance backlog represents the estimated amount of money needed to restore deteriorating components to their original operating condition. In many cases, restoring components to their original operating condition will fall short of today's standards for function and/or aesthetics; therefore, the cost to fully renovate or modernize a building is usually many times greater than the cost of the deferred maintenance in the building

Cost Estimates

The maintenance backlog for a building represents the total cost to repair the maintenance deficiencies documented in the facility condition assessment. Many major repairs cannot be accurately estimated until considerable money is spent on research and design. Money is not invested in this level of estimating unless a project is funded for accomplishment. The estimated costs that make up the backlog are order of magnitude figures, intended to be sufficiently accurate to reflect the magnitude of the repairs needed in a particular building.

The Facilities Condition Index

The Facility Condition Index (FCI) is a simple and widely accepted measure used to indicate the relative condition of a building. It is calculated by dividing the value of the maintenance backlog in a building by the replacement value of the building and showing the result as a percentage. For example, a building with a replacement value of \$5,000,000 that contains a \$100,000 maintenance backlog has an FCI of two percent. By comparison, a building with a replacement value of \$1,000,000 that also has a \$100,000 backlog is in relatively worse condition. The FCI for that building is 10 percent. Recognized industry benchmarks assume that a building with an FCI of 5% or less is in good condition.

Over the past fiscal year many large scale projects were completed which produced a positive effect on the overall E&G FCI percentage. Some examples of these projects include the Dawson's Row #1 and Lambeth Colonnade renovations, Olsson Hall and East Range roof replacements, Madison Hall's elevator modernization, and the complete replacement of Jordan Hall's entire building HVAC system. Also, new facilities were brought on line this past year which increases the E&G replacement value. These new facilities include Lacy Hall, Blandy Field Lab, and the Drama Education Building Addition. These new facilities have zero deficiencies which in effect reduces the overall FCI.

Table 2 – 2011-2012 E&G FCI%

E&G Total Replacement Value*	E&G Total Maintenance Backlog**	E&G Overall FCI***	E&G Buildings with FCI of 5% or Higher
\$2,496,984,242	\$165,922,232	6.6%	25%

* Calculated as the total value of each building (or infrastructure component) multiplied by the percent of financial responsibilities and space allocated to 207 E&G.

** Calculated as the total cost of all deficiencies in each building (or infrastructure component) multiplied by the percent financial responsibilities and space allocated to 207 E&G.

*** Calculated by dividing the value of the deficiencies by the replacement value.

The following chart illustrates the progress made by the Deferred Maintenance Program in regards to reaching the goal of a 5% FCI by fiscal year 2015.

RESOURCES FOR MAINTENANCE AND REPAIR OF AGENCY 207 E&G FACILITIES

This report captures the financial resources for the maintenance of the University's E&G facilities from three principal sources: Maintenance Operating Budget, the Board of Visitors (BOV), and Maintenance Reserve Funding. Additionally, the correction of maintenance items are accomplished through larger projects funded by capital outlay or private fund sources. Though not captured here, these complementary resources are essential to achieving and maintaining a 5% FCI.

Maintenance Operating Budget

Funding for preventive and routine maintenance in support of Agency 207 E&G is provided through the University's annual general fund operating budget. Additional funding for maintenance of the utility infrastructure is provided by a component of utilities rates charged to each user of these services. Resources expended through the maintenance operating budget for Agency 207 E&G for the 2011-2012 fiscal year totaled \$27,657,635. This figure includes operating maintenance funding for both Law and Darden.

Board of Visitors

Beginning with the 2005-2006 fiscal year, the University's Board of Visitors made available a special allocation of funds for deferred maintenance projects. When the initiative began, the plan was to incrementally increase annual funding until the year 2015. Since its inception, nearly \$39 million has been spent from the BOV accounts, of which \$8,737,553 was spent in the last fiscal year.

Maintenance Reserve Funding

Maintenance Reserve is a component of the Commonwealth's capital outlay budget appropriated by the General Assembly each biennium. Maintenance Reserve is intended to fund major repairs costing between \$25,000 and \$1,000,000 each. The total expenditures for Agency 207 E&G from the 1982-1984 biennium through June 30, 2013 has been over \$117 million, of which \$4,923,821 was spent in the last fiscal year. Initiated in the 1982-84 biennium, Maintenance Reserve acknowledges the need of an on-going financial commitment to address deferred maintenance needs within state facilities. At that time Maintenance Reserve funds helped to slow the deterioration of building systems, which extended the useful life of a facility. Today Maintenance Reserve funds combined with capital renewals play a crucial role in the management and reduction of UVa's deferred maintenance backlog. Note that the State allocation of Maintenance Reserve funds is not available for Agency 209 and Agency 207 Auxiliaries.

Maintenance Reinvestment Rate

The ratio of the building maintenance expenditures to the total replacement value is known as the maintenance reinvestment rate. The total amount spent on building maintenance can be calculated by combining the amounts spent from the operating budget, the BOV funds, and Maintenance Reserve. For 2011–2012, the figure for Agency 207 E&G was \$41,319,009.

These expenditures represented 1.65% of the replacement value of the E&G buildings and infrastructure. Various authorities cite a range of 1.5% to 4% as the reinvestment rate necessary to prevent the growth of a deferred maintenance backlog. Incremental funds are needed to reduce the inflation-adjusted backlog. Given the age of many of the University's buildings and the substantial amount of deferred maintenance already accumulated, a reinvestment rate of at least two percent is warranted. To this end, when newly constructed facilities come online, the Budget Office allocates two percent of the each building's construction cost to the annual maintenance operations budget.

The following chart illustrates the progress made towards reaching the goal of a 2% Maintenance Reinvestment Rate (MRR) as represented by total expenditures. The MRR in some university publications shows the total budgeted amount allocated to the Deferred Maintenance program. This report's focus is what was expended during the fiscal year and its effect on both the maintenance back log and the overall FCI%.

Capital Budget

Many older buildings need considerable renovation work to make them compatible with contemporary building and life safety codes, as well as current research and teaching standards. In addition to the renovations done during these projects, many long-standing maintenance and repair needs are also corrected in the course of the work. For this reason, capital renewal projects are a valuable resource to fund correction of maintenance deficiencies in existing buildings.

Gift and Grant Funding

Gift funding has been a significant source of financial support for the restoration and preservation of the University's Jeffersonian buildings and grounds. Resources have primarily been developed through the activities of the Jeffersonian Restoration Design Committee.

Appendix A - Facilities with Agency 207 Educational and General Data as of June 30, 2013
