2018-2019 Facilities Condition Report

Page

2.....Facilities Inventory

4.....Condition of Agency 207 E&G Facilities

6.....Resources for Maintenance and Repair of Agency 207 E&G Facilities

Appendices

A..... Agency 207 Educational and General (E&G) Data

B..... Agency 207 Auxiliary Data

C..... Agency 209 Data

D..... Agency 246 University of Virginia's College at Wise Data

E..... Annual Report on the Board of Visitors Deferred Maintenance Initiative

FACILITIES INVENTORY

The University of Virginia (UVA) facilities portfolio includes 556 buildings and corresponding infrastructure, encompassing over seventeen million gross square feet of building space, with a conservatively estimated replacement value of \$5.2 billion. The facilities portfolio constitutes a significant portion of the total assets held by the University. This report offers a maintenance condition synopsis for these E&G assets and a discussion of the on-going reinvestment needed to assure their continued usefulness.

For administrative and budget purposes, the University includes three State agencies, Agency 207 University of Virginia, Agency 209 University of Virginia Medical Center, and Agency 246 Wise. Agency 207 is subdivided into two operational categories: Educational and General (E&G) and Auxiliary. The following items should be considered when discussing these categories:

1. Agency 207 E&G refers to the academic division of the University that is partially supported by general funds allocated by the Commonwealth. This includes the Medical School, Nursing School, and Health Science Center Library.
2. Agency 207 Auxiliary spaces are assigned to organizations that are self-supporting, such as the Housing and Athletic departments. These organizations receive no general fund support.
3. Agency 209 is the patient care agency, of UVA Health.

The UVA Facilities Management (FM) staff prepares this report on an annual basis. The FM staff has direct access to the inspection and cost data for Agency 207 E&G facilities. The facilities data for Agency 246 has been provided by the college's administration and can be found in Appendix D.

Table 1 below shows the number of buildings, gross square feet, and replacement value of the buildings and infrastructure maintained by Agency 207 and Agency 209.

Table 1- University of Virginia Facilities and Infrastructure Summary

	Number of Buildings*	Gross Square Feet**	Replacement Value***
Agency 207 E&G	308	7,456,394	\$2,958,649,461
Agency 207 Auxiliary	210	6,023,986	\$1,264,160,623
Agency 209	38	3,843,579	\$1,050,303,941
Total	556	17,323,959	\$5,273,114,025

* Some buildings are shared by more than one agency. For the purposes of this report, each building is counted once and each building is assigned to the category that has the majority of space in that building.

** Calculated based on the percentage of financial responsibility in each building.

*** Calculated based on the percentage of financial responsibility in each building or infrastructure component.

Replacement Value

The term “replacement value” has a long and varied history of use in the type of analysis contained in this report. A logical assumption is that “replacement value” means the total cost to replace a building if it has to be completely rebuilt. However, for this report, when “replacement value” is used, it refers to *the value of those building’s components that an organization is obligated to maintain*. It may be clearer to think of this as the asset’s total maintenance value. For newly constructed and renovated facilities, replacement value refers to a portion of the total amount that would be needed to actually build or replace the facility, specifically the construction cost. Replacement value does not include additional costs for line items such as architectural fees, project management fees, and furnishings; nor does it include the cost of adapting a building to changing occupant needs, building codes, or fire and life safety requirements.

Infrastructure

Facilities Management maintains many assets that are not buildings, such as sidewalks, roads, curbs, steam tunnels, sewer and water lines, buried electrical lines, and light poles. In fact, the infrastructure assets account for \$863,715,133 of the total replacement value shown in Table 1 with a proportion of 59% 207 E&G, 22% 207 AUX, and 19% 209.

Age

Generally speaking, as the age of a building or infrastructure component increases, so does the maintenance demand. Although some components of a building can last for many decades, such as the foundation, framing, and exterior walls; the average life span of most electrical, mechanical, and roofing systems is between twenty-five and thirty-five years.

Of the 307 buildings assigned to Agency 207 E&G, 240 (78%) are more than 30 years old. For Agency 207 E&G facilities, the average age is 73 years, the median age is 59 years, and the weighted age is 58 years, where weighted age assigns more weight to larger facilities.

CONDITION OF AGENCY 207 E&G FACILITIES

Maintenance Backlog

Facilities Management gathers information about the maintenance needs of the Agency 207 E&G buildings by performing facility condition assessments. The goal is to inspect E&G buildings every four years. The assessments result in a number of immediate repairs. They also document repairs that are needed at the time of the inspection but cannot be undertaken at that time due to funding or other constraints. These deferred maintenance items become the maintenance backlog for that building. It is important to distinguish between what a facility may need in terms of maintenance, and what it may need in terms of adaptation or modernization. The maintenance backlog represents the estimated amount of money needed to restore deteriorating components to their original operating condition. In many cases, restoring components to their original operating condition will fall short of today's standards for function and/or regulatory compliance; therefore, the cost to fully renovate or modernize a building is usually many times greater than the estimated deferred maintenance backlog.

Cost Estimates

The maintenance backlog for a building represents the total cost to repair the maintenance deficiencies documented in the facility condition assessment. Many major repairs cannot be accurately estimated until considerable money is spent on research and design. Money is not invested in this level of estimating unless a project is funded for accomplishment. The estimated costs that make up the backlog are order of magnitude figures, intended to be sufficiently accurate in reflecting the magnitude of the repairs needed for a particular building.

The Facility Condition Index

The Facility Condition Index (FCI) is an effective and widely accepted measure used to indicate the relative condition of a building. It is calculated by dividing the value of the maintenance backlog in a building by the replacement value of the building and showing the result as a percentage. For example, a building with a replacement value of \$5,000,000 that contains a \$100,000 maintenance backlog has an FCI of two percent. By comparison, a building with a replacement value of \$1,000,000 that also has a \$100,000 backlog is in relatively worse condition. The FCI for that building is 10 percent. Recognized industry benchmarks consider a building with a FCI of 5 percent or less to be good condition.

Over the past fiscal year, many building system renewal projects were completed which slowed the growth of the maintenance backlog. Some examples of these projects include the Bryan Hall roof replacement, Clemons Library and Astronomy Building restroom renovations, Zehmer Hall HVAC renewal, and Olsson Hall structural repairs. Additional maintenance renewal projects include the Drama Building BAS replacement, Old Cabell Hall patio waterproofing, and Campbell Hall concrete repairs. Also, much of the backlog in the Chemistry building was addressed this past year during the building's capital renovation.

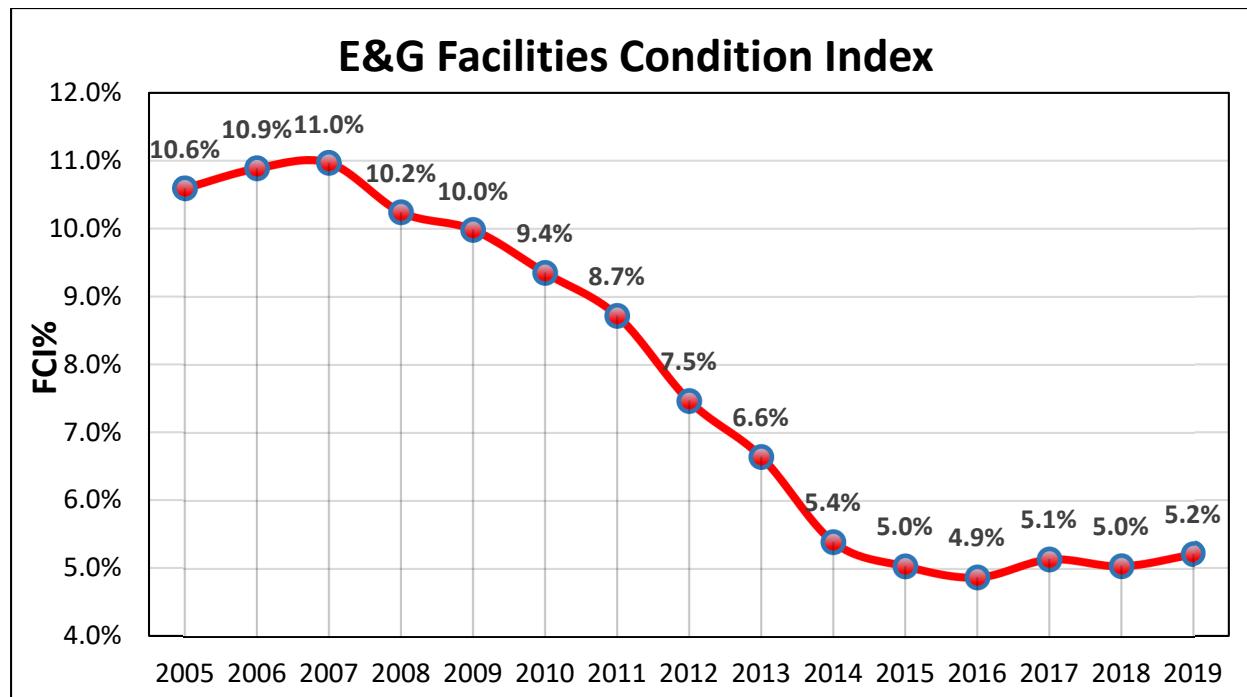

Table 2 – 2018-2019 E&G FCI%

E&G Total Replacement Value*	E&G Total Maintenance Backlog**	E&G Overall FCI***	E&G Buildings with FCI of 5% or Higher
\$2,958,649,461	\$155,300,622	5.2%	28%

- * Calculated as the total value of each building (or infrastructure component) multiplied by the percent of financial responsibilities for Agency 207 E&G.
- ** Calculated as the total cost of all deficiencies in each building (or infrastructure component) multiplied by the percent financial responsibilities for Agency 207 E&G.
- *** Calculated by dividing the value of the deficiencies in the Maintenance Backlog by the replacement value.

The achievement created in the last fourteen years would not have been possible without the transformational support, planning, and funding commitments of the BOV. Through this support, along with the investments made in maintenance operations, maintenance reserve and major capital renewals, the Deferred Maintenance Program achieved its goal of a 5 percent FCI, as of June 30, 2015. The program continues to maintain the University's facilities in good condition through the combination of maintenance reinvestment and whole building capital renewals. This year the FCI increased slightly due to the known deficiencies within the building portfolio being elevated in priority, as well as new deficiencies being discovered and added to the overall backlog. The backlog is expected to improve to 5% or less as the Gilmer and Alderman Library renovations address the maintenance deficiencies as well as adapting the buildings to meet current University programs and building codes.

—The following chart illustrates the progress made by the Deferred Maintenance Program in regards to achieving the goal of a 5 percent FCI by fiscal year 2015.

RESOURCES FOR MAINTENANCE AND REPAIR OF AGENCY 207 E&G FACILITIES

This report captures the financial resources for the maintenance of the University's E&G facilities from three principal sources: Maintenance Operating Budget, the Board of Visitors (BOV), and Maintenance Reserve funding. Additionally, the correction of maintenance items are accomplished through larger projects funded by capital outlay or private fund sources. Though not captured here, these complementary resources are essential to achieving and maintaining a 5 percent FCI.

Maintenance Operating Budget Expenditures

Funding for preventive and routine maintenance in support of Agency 207 E&G is provided through the University's annual operating budget. Funding for maintenance of the utility infrastructure is provided by a component of utilities rates charged to each user of these services. Resources expended through the maintenance operating budget for Agency 207 E&G for the 2018-2019 fiscal year totaled \$29,809,720. This figure includes operating maintenance funding for both Law and Darden.

Board of Visitors

Beginning with the 2005-2006 fiscal year, the University's Board of Visitors made available a special allocation of funds for deferred maintenance projects. When the initiative began, the plan was to incrementally increase annual funding to a budgeted target maintenance reinvestment rate of 2%. Further detail on the Maintenance Reinvestment Rate is found below. During the last fiscal year \$6,669,626 was expended from the BOV deferred maintenance account.

Maintenance Reserve Funding

Maintenance Reserve is a component of the Commonwealth's capital outlay budget appropriated by the General Assembly each biennium. Initiated in the 1982-84 biennium, Maintenance Reserve acknowledges the need of an on-going financial commitment to address deferred maintenance needs within state facilities. Maintenance Reserve is intended to fund major repairs costing between \$25,000 and \$2,000,000 each. A total of \$8,872,434 was spent from this account in the last fiscal year. Maintenance Reserve funds address the deterioration of building systems, thus extending the useful life of a facility. Today, Maintenance Reserve funds, combined with capital renewals, play a crucial role in the management and reduction of UVa's deferred maintenance backlog. Note that the State does not allocate Maintenance Reserve funds to Agency 209, Agency 207 Auxiliaries, and a small number of Agency 207 E&G facilities.

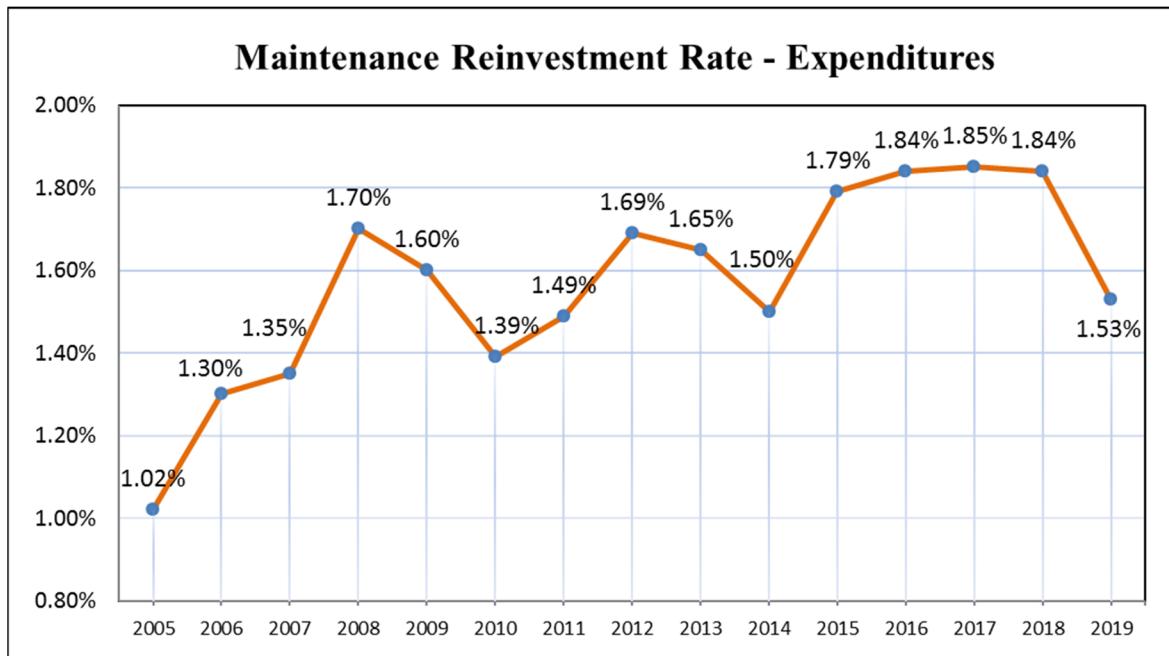

Maintenance Reinvestment Rate

The ratio of the building maintenance expenditures to the total replacement value is known as the maintenance reinvestment rate. The total amount spent on building maintenance can be calculated by combining the amounts spent from the operating budget, the BOV funds, and Maintenance Reserve. For 2018-2019, the figure for Agency 207 E&G was \$45,351,780.

These expenditures represented 1.53 percent of the replacement value of the E&G buildings and infrastructure. Various authorities cite a range between 1.5 percent and 4 percent as the

reinvestment rate necessary to slow the growth of a deferred maintenance. Taking into consideration the age of many of the University's buildings and the substantial amount of deferred maintenance already accumulated, the BOV established a goal to achieve a reinvestment rate of 2 percent. In addition to the reinvestment rate, Agency 207 E&G funds new facility maintenance at 2 percent of the building's construction cost.

The following chart illustrates the progress made towards reaching the goal of a 2% Maintenance Reinvestment Rate (MRR) as represented by total expenditures. This MRR differs from the one documented in BOV update on the Deferred Maintenance initiative, appendix E, which shows the total budgeted amount allocated to the Deferred Maintenance program. This report's focus is what was expended during the fiscal year and its effect on both the maintenance back log and the overall FCI.

Capital Budget

Many older buildings need considerable renovation work to make them compatible with contemporary building and life safety codes, as well as current research and teaching standards. In addition to the renovations done during these projects, many long-standing maintenance and repair needs are also corrected in the course of the work. For this reason, capital renewal projects are a valuable resource to fund the correction of maintenance deficiencies in existing buildings.

Gift and Grant Funding

Gift funding has been a significant source of financial support for the restoration and preservation of the University's Jeffersonian buildings and grounds. Resources have primarily been developed through the activities of the Jeffersonian Restoration Design Committee.

Summary

In 2005-06, the Board of Visitors embarked on a ten-year plan to reduce the deferred maintenance backlog of E&G facilities and the corresponding FCI to 5 percent or less. The Board also took steps to establish adequate annual maintenance funding to limit the accumulation of deferred maintenance. Today the FCI is 5.2 percent, which is in the “good” category by industry standards. The FCI shows a noteworthy improvement since 2005-06, when the Report on the Condition of University Facilities reported the E&G FCI to be 10.9 percent. The University has made steady progress in its investments through maintenance operations, Maintenance Reserve, and BOV funding that have improved the maintenance reinvestment rate, a rate that was 1.02 percent in 2005-06 and is now 1.53 percent measured in expenditures.

Annual Report on the Board of Visitors Deferred Maintenance Initiative

This report details the continued progress made since the inception of the Deferred Maintenance (DM) initiative approved by the Board of Visitors in 2005. The focus of this document includes the progress to curtail the overall maintenance backlog, the budgeted Maintenance Reinvestment Rate (MRR) and details of recent completed DM projects and accomplishments.

**University of Virginia
Status Report on the Plan to Address Deferred Maintenance
FY 2018-2019**

Executive Summary

The University of Virginia's facilities portfolio includes 556 buildings and related infrastructure, encompassing over seventeen million gross square feet of building space, with a conservatively estimated replacement value of \$5.2 billion. The facilities portfolio constitutes a significant portion of the total assets held by the University and should be appropriately maintained.

In December 2004, after hearing a presentation about the University's deferred maintenance backlog, the Board of Visitors embarked on a long-term plan to accomplish two objectives:

- (1) Reduce the deferred maintenance backlog to a reasonable level by 2015, with a target facility condition index (FCI) of 5 percent or less. At the time, the FCI was 10.6 percent.
- (2) Establish adequate annual maintenance funding to prevent the further accumulation of deferred maintenance, by increasing the then current 1.2 percent reinvestment rate to a 2.0 percent annual reinvestment rate.

Progress has been made in the last twelve years. Annual increases in the maintenance operating budget, combined with the maintenance reserve appropriation has improved the maintenance reinvestment rate to 2.05 percent. We also budget 2 percent of construction costs to maintain each new building we bring on line. Investments through maintenance operations, maintenance reserve and major capital renewals have reduced the FCI to 5.2 percent as of June 30, 2019.

The auxiliaries, Medical Center, and the College at Wise are continuing to address their respective backlogs. The Medical Center, Facilities Planning and Construction, and Health System Physical Plant have developed a building-by-building and system-by-system evaluation of the infrastructure of all Medical Center facilities. The Medical Center Operating Board and the Buildings & Grounds Committee have approved this program of infrastructure enhancement over a period of 10-15 years based on need and available resources from the Medical Center's annual capital expenditure budget. The College at Wise has a facility condition index of 2.8 percent and has a current maintenance reinvestment rate of 0.5 percent. This is the last reported MRR for Wise. This low FCI percentage is largely due to newer construction and capital renewal of existing buildings.

Deferred Maintenance Backlog

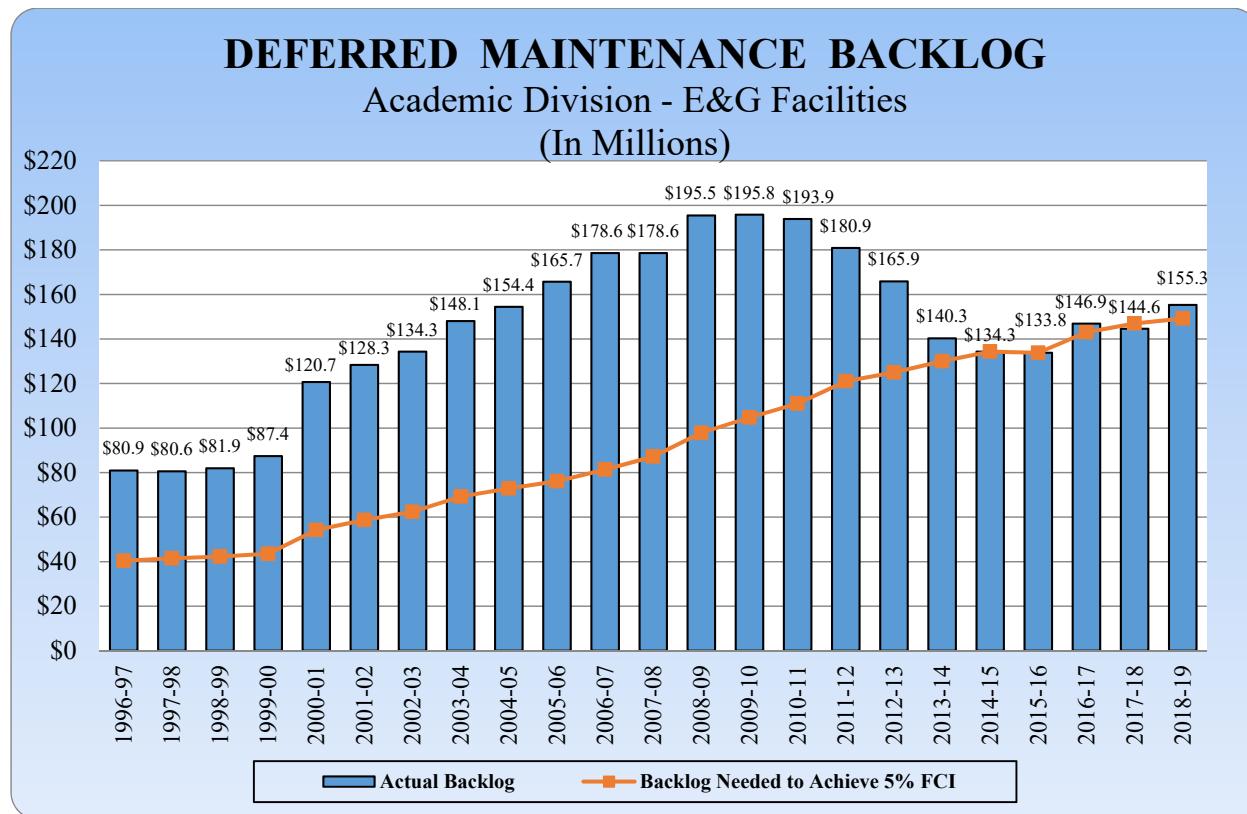

Overview

Facilities Management determines the maintenance needs of the University's E&G buildings by performing facility condition assessments. The goal is to inspect E&G buildings once every four years. The assessments result in a number of immediate repairs. They also document repairs that are needed but cannot be undertaken at the time of inspection due to funding constraints, occupancy requirements, or other factors. These deferred maintenance items become the maintenance backlog for that building.

It is important to distinguish between what a facility may need in terms of maintenance, and what it may need in terms of adaptation or modernization. The maintenance backlog represents the amount of money needed to restore deteriorated components to their original operating condition. In many cases, restoring components to their original operating condition will fall short of today's standards for function and/or aesthetics; therefore, the cost to fully renovate or modernize a building is usually many times greater than the cost of the deferred maintenance in the building. The deferred maintenance backlog does not include the cost of deficiencies or improvements to safety, accessibility, and building code issues.

Quantify – Current Deferred Maintenance Backlog

As of June 30, 2019 the Academic Division E&G deferred maintenance backlog was \$155 million. The graph below shows the backlog trend and the 5 percent FCI goal, which was first achieved in fiscal year 2014-15.

In developing the original deferred maintenance reduction plan, it was recommended that the University undergo a ten-year strategy to improve its E&G facilities from “poor” condition to “good” condition by reducing the facility condition index to 5 percent by 2015. At program inception, predictions were made about the possible replacement value in 2015, which would be impacted by both inflation and new construction. The assumed replacement value was used to project the deferred maintenance backlog reduction target of approximately \$130 million in order to achieve the 5 percent FCI. The incremental cost to improve the condition of E&G buildings and infrastructure to “good” over the ten-year period was estimated to be \$125 million over the

then current level of maintenance funding. The additional cost to address safety, accessibility, and code issues while correcting identified maintenance deficiencies was calculated to be \$31 million over the same ten-year period, bringing the combined required investment to \$156 million. In addition to funds available in the maintenance operations and maintenance reserve budgets, the University will rely on the capital budget to address maintenance items through building renewals such as the Chemistry and Gilmer renovations and upcoming Alderman Library whole building renewal.

Facility Condition Index

Overview

The Facility Condition Index (FCI) is an effective and widely accepted measure used to indicate the relative condition of a building. It is calculated by dividing the value of the maintenance backlog in a building by the replacement value of the building and showing the result as a percentage.

For example, a building with a replacement value of \$5 million that contains a \$100,000 maintenance backlog has an FCI of 2 percent. By comparison, a building with a replacement value of \$600,000 that also has a \$100,000 backlog is in relatively worse condition. The FCI for that building is 17 percent.

Recognized industry benchmarks consider that a facility with an FCI of less than 5 percent to be “good” condition; a facility with an FCI between 5 percent and 10 percent is in “fair” condition; and a facility with an FCI of more than 10 percent is in “poor” condition.

Quantify – Current FCI

As of June 30, 2019 the Academic Division E&G deferred maintenance backlog is \$155 million, with a total facility replacement value of nearly \$2.95 billion resulting in an FCI of 5.2 percent.

Maintenance Reinvestment Rate

Overview

The ratio of the building maintenance expenditures to the total replacement value is known as the maintenance reinvestment rate (MRR). Various authorities cite a range of 1.5 percent to 4 percent as the reinvestment rate necessary to prevent the growth of a deferred maintenance backlog. Given the age of many of the University’s buildings and the substantial amount of deferred maintenance already accumulated, a reinvestment rate of at least 2 percent is warranted. To this end, when newly constructed facilities come online, the University allocates 2 percent of the building’s construction cost to the annual maintenance operations budget.

Quantify – Current MRR

The total amount invested in building maintenance can be calculated by combining the amounts available from the operating budget and from Maintenance Reserve. For 2018–19 we budgeted \$60.5 million for maintenance of E&G facilities or 2.0 percent of the replacement

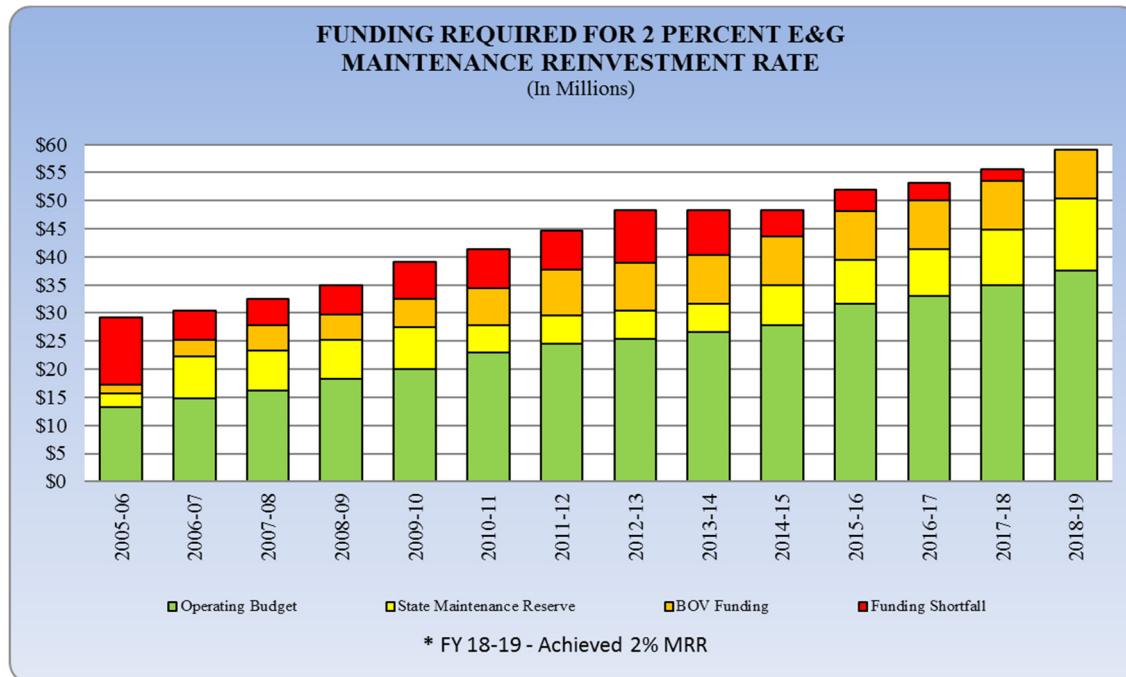

value of the E&G buildings and infrastructure. Achieving the 2.0% MRR was made possible this past year due to the increase in State Maintenance Reserve funding.

The table below shows the reinvestment rate for the University's E&G buildings since the Board of Visitors initiative began. These figures are based on budgeted funds available for investment in a given year rather than actual expenditures which may vary from year-to-year based on time required to plan and execute the work.

Budgeted Maintenance Reinvestment Rate

Fiscal Year	Budgeted MRR%	Fiscal Year	Budgeted MRR%	Fiscal Year	Budgeted MRR%
2005-06	1.20%	2010-11	1.65%	2015-16	1.86%
2006-07	1.66%	2011-12	1.70%	2016-17	1.89%
2007-08	1.70%	2012-13	1.61%	2017-18	1.92%
2008-09	1.71%	2013-14	1.68%	2018-19	2.05%
2009-10	1.66%	2014-15	1.86%		

The graph below shows the funding trend and annual shortfall relative to a 2 percent funding level over the past fourteen fiscal years. Significant progress has occurred since the inception of the Board initiative to achieving a 2 percent MRR.

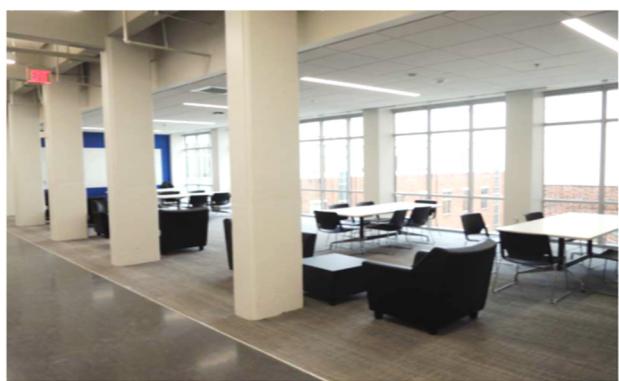

Accomplishments

Capital Renewal Projects

Whole building renewals are crucial to successfully reduce and maintain the University's overall facility condition index. It is the most efficient method of dealing with the maintenance challenges associated with an older facility. A renewal project corrects maintenance needs while adapting the building to planned use and current codes.

The Chemistry building's Capital Renewal is currently in progress and will be wrapping up at the end of the year. This renewal project is funded through State appropriations and The College of Arts and Sciences. The renovation will correct many of the large scale maintenance deficiencies and improve the programing capabilities. Below are some pictures of the work currently in progress.

Chemistry South Addition – 3rd floor collaboration area

Chemistry – New AHU's 201 & 502

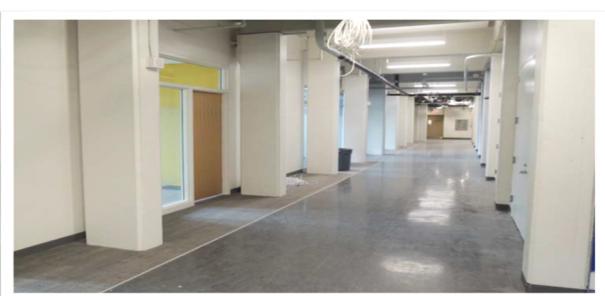

Chemistry – 3rd floor class lab

Chemistry – New exhaust fan & energy recovery

Chemistry – 4th floor lab demo

Chemistry – 4th floor lab near completion

Elevator modernization project

Over the past year the deferred maintenance program has continued to improve the condition of the E&G elevators throughout Grounds. Since the deferred maintenance initiative approximately 30 E&G elevators have been renewed. The Physics freight and the Observatory Mountain Engineering Research Facility (OMERF) elevators were the most recently completed.

OMERF – Elevator before

OMERF – Elevator modernization after

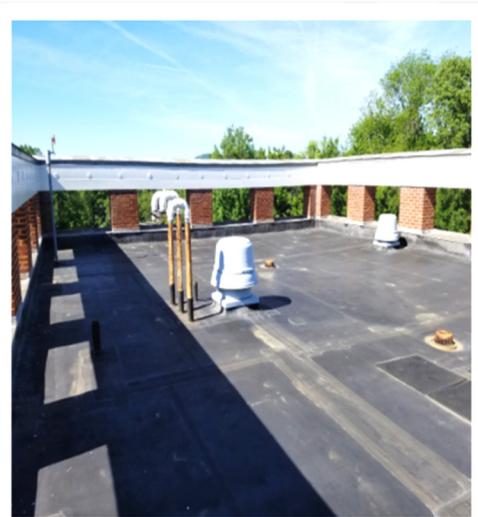

Physics Building – Elevator before

Physics Building – Elevator Modernization Completed

Deferred Maintenance Projects

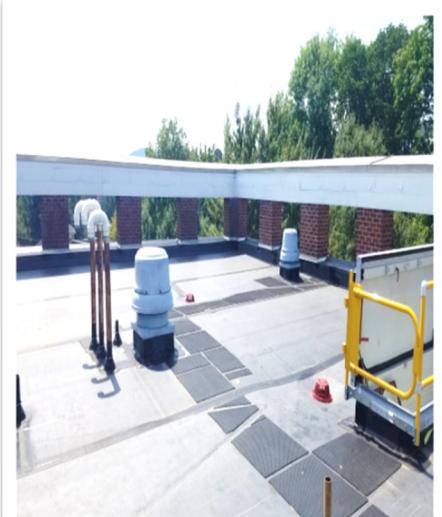

There are over 30 deferred maintenance projects in progress, totaling approximately \$24 million, including the upcoming Physics Addition AHU and controls renewal, Campbell Hall building controls replacement, and High Energy Physics electrical switch gear replacement. Notable roofing projects that took place during 2018-2019 were the Bryan Hall, and Faulkner House roofing replacements.

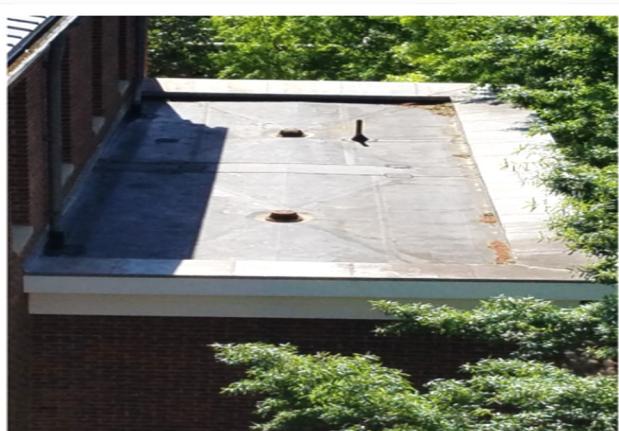

Bryan Hall – Roof before

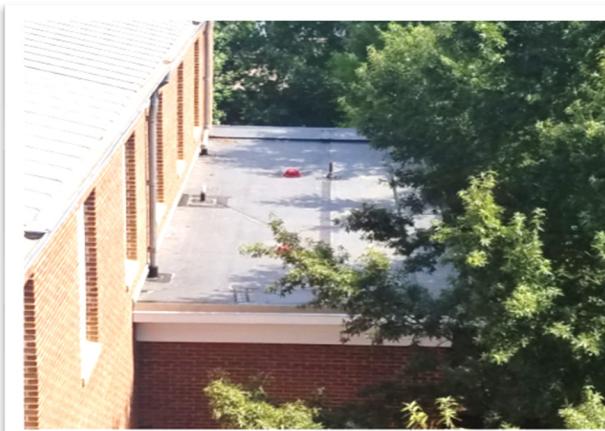

Bryan Hall – Roof in progress

Bryan Hall – Roof after

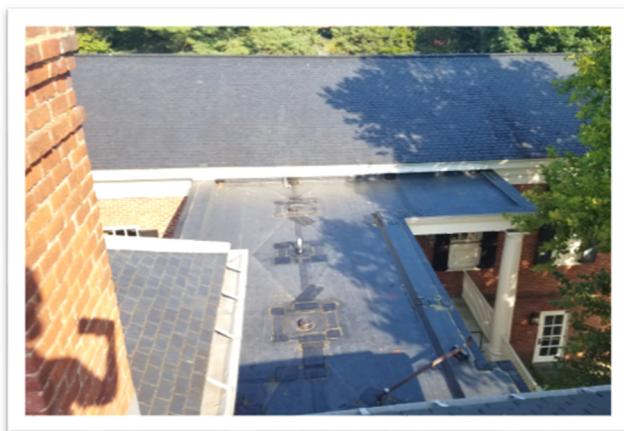

Bryan Hall – Small roof before

Bryan Hall – Small roof after

Faulkner House - Roof before

Faulkner House – Roof after

By completing deferred maintenance projects, the maintenance backlog is reduced and the overall condition of the University's facilities improved. Since 2005-06, hundreds of deferred maintenance projects have been completed. In 2018-19, projects such as the Astronomy Building and Clemons Library restroom renovations, MR-5 BAS controls replacement, and the Aurbach Building's cooling tower replacement.

Astronomy Building – Bathrooms before

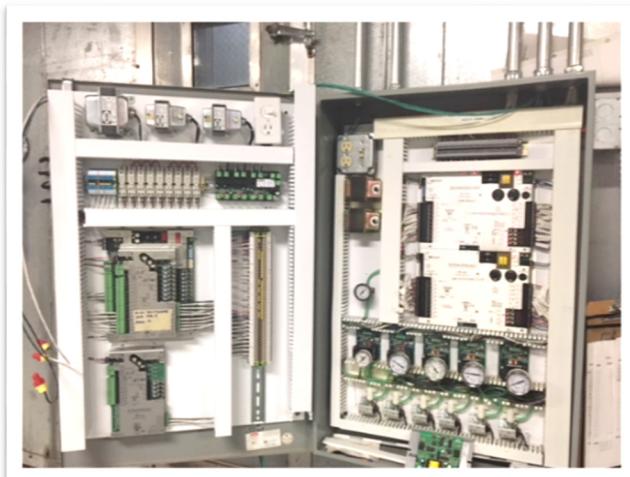

Astronomy Building – Bathrooms after

Aurbach - Cooling tower before

Aurbach – Cooling tower after

MR-5 – New BAS system

Deferred Maintenance Contribution to Major Renewal Projects

The Deferred Maintenance program has contributed funding towards addressing deficiencies in several large scale renovation projects during FY18-19. Most notably the Carr's Hill President's House exterior repairs and the upcoming Pinn Hall exterior masonry renewal. These projects addressed needed system renewals in buildings that are currently not scheduled for a Capital renewal.

State Maintenance Reserve Funding

Maintenance Reserve has funded nearly \$139 million in maintenance projects from the 1982-84 biennium through 2018-19 for E&G facilities. In the 2008-10 biennium, the Maintenance Reserve budget was set at approximately \$14.5 million. The University's allocation was reduced in the 2010-12 and 2012-2014 bienniums to \$10.05 million; however it was increased back to \$14.9 million for the 2014-2016 biennium and increased again for the 2016-2018 biennium to \$17.2 million. The University's allocation for the 2018-2020 was substantially increased to \$25.8 million.

Summary

In 2005-06, the Board of Visitors embarked on a long-term plan to reduce the deferred maintenance backlog of E&G facilities and the corresponding FCI to 5 percent or less. The Board also took steps to establish adequate annual maintenance funding to prevent the further accumulation of deferred maintenance. Today the FCI is 5.2 percent. The FCI has shown a noteworthy improvement since 2004-05, when the Report on the Condition of University Facilities reported the E&G FCI to be 10.6 percent. The University has made significant progress in enhancing its operating maintenance budget toward the targeted two percent reinvestment rate, a rate that began in 2005-06 as 1.2 percent and is now 2.05 percent. Building systems deteriorate over time and costs rise due to code changes and inflation, therefore it is important that adequate funding support continue to be provided to sustain this initiative.
